## IN THE CLAIMS

Please cancel claims 19–23 without prejudice or disclaimer.

Please amend claim 1 as follows:

1. (currently amended) A sliding component, which is a component of a

compressor, comprising:

a metal base member having a sliding surface; and

a coating layer made of silane-modified resin, the silane-modified resin being

made from resin that is soluble in solvent and is equal to or higher in heat-resistant than epoxy

resin, the coating layer being formed on the sliding surface,

wherein the compressor is a piston type, the compressor includes a housing, a

drive shaft and a rotary valve that corresponds to the sliding component, the rotary valve is

integrated with the drive shaft and supports the drive shaft on the housing, the housing defines a

compression chamber, a suction pressure region and a gas passage, the gas passage interconnects

the compression chamber and the suction pressure region, and the rotary valve opens and closes

the gas passage as the rotary valve synchronously rotates with the drive shaft.

2. (original) The sliding component according to claim 1, wherein the

coating layer contains solid lubricant.

(original) The sliding component according to claim 2, wherein the solid 3.

lubricant includes at least one of fluororesin, molybdenum disulfide and graphite.

4. (original) The sliding component according to claim 3, wherein the

fluororesin is selected from the group consisting of polytetrafluoroethylene, perfluoroalkoxy

alkane, ethylene-tetrafluoroethylene copolymer and fluoroethylenepropylene.

2

- 5. (original) The sliding component according to claim 2, wherein the coating layer contains at least one of hard particles, extreme-pressure agent and surface-active agent.
- 6. (original) The sliding component according to claim 1, wherein the silane-modified resin includes one of an alkoxysilyl group and an aryloxysilyl group.
- 7. (original) The sliding component according to claim 6, wherein an alkoxy group of the alkoxysilyl group includes 1 to 6 carbon atoms.
- 8. (original) The sliding component according to claim 7, wherein the alkoxy group includes 1 to 4 carbon atoms.
- 9. (original) The sliding component according to claim 8, wherein the alkoxy group is selected from the group consisting of a methoxy group, an ethoxy group and a propoxy group.
- 10. (original) The sliding component according to claim 6, wherein an aryloxy group of the aryloxysilyl group includes 6 to 10 carbon atoms.
- 11. (original) The sliding component according to claim 10, wherein the aryloxy group includes 6 to 8 carbon atoms.

12. (original) The sliding component according to claim 11, wherein the

aryloxy group is selected from the group consisting of a phenyloxy group, a dimethylphenyloxy

group and a methylphenyloxy group.

13. (original) The sliding component according to claim 1, wherein the

silane-modified resin is a silane-modified polyamideimide resin.

14. (original) The sliding component according to claim 13, wherein the

polyamideimide resin includes at least one of a carboxyl group and an acid anhydride group at its

terminal of molecule, glycidylether group-containing alkoxysilane partial condensate being

obtained by dealcoholization of glycidol and alkoxysilane partial condensate, the silane-modified

resin being obtained by ring opening esterification reaction between the polyamideimide resin

and the glycidylether group-containing alkoxysilane partial condensate.

15. (original) The sliding component according to claim 13, wherein the

coating layer of the silane-modified resin is formed by applying and calcining silane-modified

polyamideimide resin varnish containing 1 to 10 weight percent of silica in its cured residue.

16. (original) The sliding component according to claim 1, wherein the

silane-modified resin is a silane-modified epoxy resin.

4

Serial No. 10/602,206 Response dated April 9, 2007 Reply to Final Office Action of February 8, 2007 Docket No. 5095-4064

17. (original) The sliding component according to claim 1, wherein the silane-modified resin is a silane-modified polyimide resin.

18.–23. (cancelled)
